Project Description

Our project aims to help teaching assistants improve as educators by gathering student feedbacks and monitor development of professional skills. We will create an interactive tool that allows students to submit instant suggestions in qualitative data and weekly surveys in quantitative data to check the progresses. It will ensure the connections between teaching assistants and students, and teaching assistants will be able to make adjustments in teaching methods and improve their performance in the classroom based on the feedbacks and students' needs.

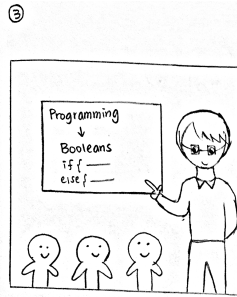

# Hand Drawn Storyboard

① Tom is going to teach his 3rd section tomorrow, and he really needs suggestions from his students.
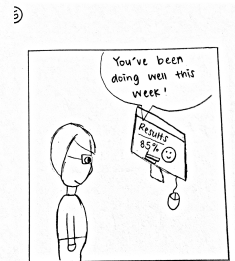

② He opens the web app to view feedbacks his students have submitted.

③ He teaches and focuses on the concepts that his students have problems with (based on the feedbacks)
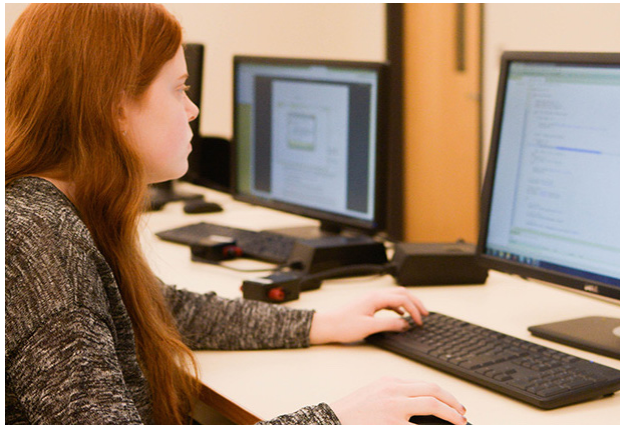

④ After class, Tom is curious about how he has been doing this week.

⑤ Tom checks his weekly development at the end of the week after his students fill out the survey.
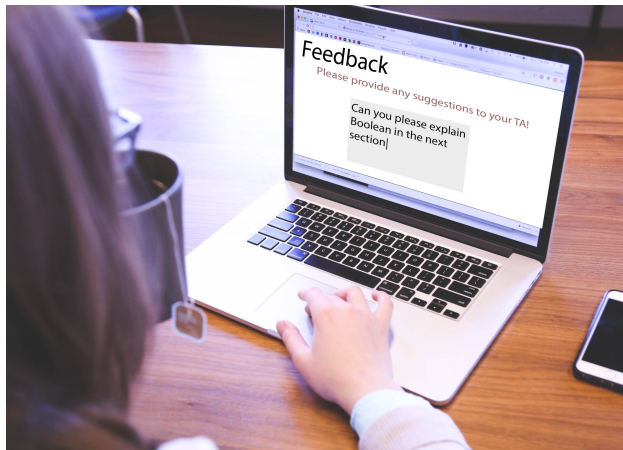

Photo Storyboard

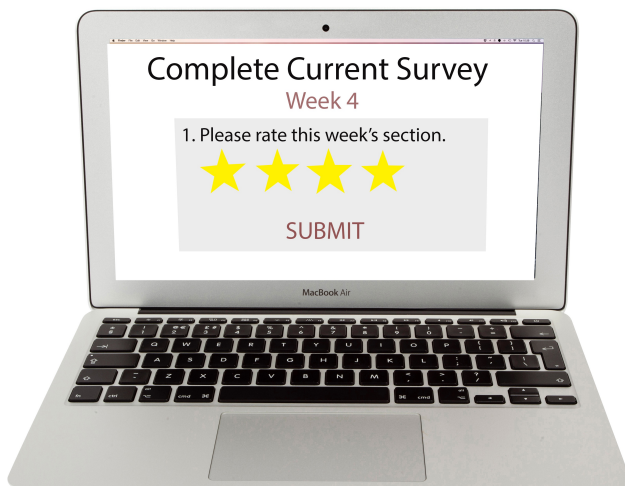

1. Sarah is working on her CSE 142 homework.

2. She is confused about the Boolean concept.

3. She opens the web app and submits her

4. Her TA tries his best to explain the concept in the section.

5. Sarah feels that her TA explained the Boolean concept clearly, so she goes to the web app and rate her TA 4 stars on the weekly survey.
